

## Design and Visualization Intern

VIRTUAL STUDENT FEDERAL SERVICE

Project Title	Design and Visualization Intern
Project Summary	Are you an information catalyst? Help manage and visualize technical information that is used in employee training materials.
Country	United States

## Project Description

We need your skills in infographics, graphic design, editing, and writing to help us transform information into engaging content. You will help with visualizing technical information as infographics, working on design packages to create templates for PowerPoints, begin/end slates, and short documents for employee training. As technology brings change, older documents, handbooks, and user guides need your writing skills to create engaging content and "Frequently Asked Questions" documents to help employees gain new skills. You will help with introductory research for natural resource topics, video editing, and possible photo cataloging. There are additional opportunities to do some entry level geospatial projects.

## Required Skills or Interests

### Skill(s)

Coding

Data visualization

Editing and proofreading

Educational design

GIS expertise

Graphic design

Marketing

Research

Storytelling/blogging/vlogging

Videography
